

The Moravian and Silesian Region viewed through Unemployment

PAVLÍNA PELLEŠOVÁ*

ANNOTATION. The article deals with the analysis of the problems related to unemployment in the Moravian and Silesian Region in the Czech Republic. We have analysed the problems by means of age and education structure of population and thereafter by means of the sector structure. The analysis results provide evidence that the sector structure as well as the age structure of population in the Region shows similar tendencies like in the Czech Republic. The education structure of the Region's population reflects the previous orientation of the Region to mining and raw material exploitation and carries along a number of problems related to the structural unemployment as a result of the Region's restructuring. The unemployment rate in the Region exceeds the national average and the individual areas of the Region achieve double amounts. In addition, the analysis indicates that the wage level in the Region when compared to the CZ develops similarly in the individual sectors; the differences tend to deepen, however. The benefits of solution of these problems may be seen in the increasing interest of foreign investors in the Region, namely in the area of modern manufacturing industry and sophisticated sectors.

KEY WORDS. Czech Republic, Moravian-Silesian Region, population, structure, rate of economic activity, education, labours force, employment, rate of unemployment, economically inactive populations, sector, branches, free working places, average.

At the present time, the Moravian-Silesian Region accounts for 12.4 % in the population of the Czech Republic. Considering the age structure, it has the highest number of inhabitants in the Czech Republic and in region in the productive age, i.e. approx. 70—71 %. The rate of economic activity of population in the Moravian-Silesian Region (MSR) has got a decreasing tendency like the whole number of population but also according to the structure by gender. In 1999 — 2006, the rate of economic activity decreased from 60.99 % to 59.4 % in the Czech Republic (CR) and in the region from 59.16 % to 57.30 %. This decrease was higher among men than women, Chart 1 and Graph 1. The labour force shows analogical tendency like the rate of economic activity (Chart 2). On the contrary, economically inactive population (population until finishing the studies and population in after-productive age) — Graph 2 has got a slightly rising tendency in the Czech Republic and in Moravian-Silesian Region, Chart 3.

* Pavlína Pellešová, doc., Ing., Ph.D., Associate Professor, School of Business Administration in Karviná Silesian University in Opava. At the present time, she is the Deputy Head of the Doctoral Studies Institute and Department of Economics Secretary, she teaches the following courses: Microeconomics, Macroeconomics, Economic Policy, Applied Economic Policy, etc.

Graph 2 Economically inactive populations
in the CZ and in the MSR¹⁴

Structure of population by education on basis of census reflects previous structure in the region by sectors, which was concentrated on mining and exploitation of raw materials. This is the reason why the most of population has got basic education (GCSE) or secondary school without «A — levels». This situation has changed slowly. It is increasing number of NVQ Trained population and increasing tendency has got number of population with university, (since 2006 the number in the MSR has unchanging), Chart 4, graph 3, graph 4.

(thousand persons) in the Czech Republic¹⁷

On total unemployment of the Czech Republic in watched period has got Moravian-Silesian Region approximately the same share, c. 11% (1999 — 11.1 %, 2006 — 11.6 %). Employment in individual sectors of national economy has changed in the 1990's. Movement from the primary and secondary sector to tertiary sector can be seen at Chart 5 — share of employment in comparison with years 1990 and 2006 in primary sector decreased from 15.3 % to c. 4 % and in third sector increased from 42.8 % to 56 %. Undergoing structural changes are showed through further lay offs of labour force; it causes pressures on employment in the third sector. Its absorption is quite exhausted, in spite of this, the Moravian-Silesian Region belongs among the regions with the lowest employment in services (c. 15 thousand persons in year 2006), Chart 6. Solution of employment of laid off employees causes necessity to create new working places, especially in small and medium-sized businesses.

We have divided enterprises into non-financial enterprises, financial and government institutions, households and non-profit institutions which provide services to households; the highest number of employees is in non-financial institutions and the lowest number in non-profit organizations; a decrease in employment in private national institutions seems to be «alarming», it causes conditions for doing business in the Czech Republic. If we compare private and public sector, employment in private national sector is higher but has got

¹⁷ Source: own

a slightly decreasing tendency. On the other hand, private sector with foreign control has got an increasing tendency, which can be documented by super-national claims and arrival of foreign investors.

Chart 5

	<i>Moravian-Silesian Region</i>	16,50	228,40	290,70
2006	<i>Czech Republic</i>	181,70	1929,40	2716,00
	<i>Moravian-Silesian Region</i>	14,60	236,20	286,10

Regarding the structure of sectors, the situation has not changed a lot (Chart 7) in individual branches, except for exploitation of raw materials — a decrease in the number of employees from 70.4 to 58.6 thousand. Employment in health services and social welfare, veterinary services and other public, social and personal services shows an increasing tendency. The highest increase is in branch of self-employed people (in the Czech Republic from 1.7 to 3.2 thousand persons). By gender, women have the highest share in employment. In the Moravian-Silesian Region, the manufacturing industry has had an increasing tendency from year 2000 (from 149 to 157.8 thousand persons in 2003, Chart 8). In Trade, Repairs of motor vehicles and Consumer goods, employment had an increasing tendency — from 63 thousand persons in 1999 to 67 thousand persons in 2002. An Increasing tendency is seen also in the number of employees in Restaurants and Accommodation, Real Estates, Lease, Services for enterprises, Research and development, Health services, Veterinary and Social services.

The rate of unemployment is analysed by age, gender and education. Rate of unemployment in the Moravian-Silesian Region always reaches the highest amount in comparison with other regions and is higher than the figures of the whole Czech Republic, reaching two-fold values, Chart 9. The rate of unemployment by gender is higher among women and it is structured by age and by education. The rate of unemployment is, as an exception, lower among women in the «elementary education» and without education categories, Chart 10 (in the Czech Republic), Graph 5.

<i>15—19</i>	38,6	38,2	39,3
<i>20—24</i>	14,5	13,4	16,0
<i>25—29</i>	6,6	5,5	8,1
<i>30—34</i>	7,0	4,7	10,3
<i>35—39</i>	5,9	3,9	8,4
<i>40—44</i>	5,7	3,9	7,6
<i>45—49</i>	6,2	4,9	7,7
<i>50—54</i>	6,6	5,3	7,9
<i>55—59</i>	6,0	5,8	6,3
<i>60—64</i>	3,0	3,2	2,5
<i>65 and more</i>	2,5	2,0	3,5
<i>15—64</i>	7,2	5,9	8,9
<i>Education</i>	Total	Men	Women
<i>Elementary and no education</i>	24,5	26,2	23,2
<i>Secondary school without «A» levels</i>	7,7	6,1	10,7
<i>Secondary school with «A» levels</i>	4,9	3,5	6,1
<i>University</i>	2,4	2,2	2,7

The highest number of the unemployed is in the age group of 15—29 years and it is in the Czech Republic and in the Moravian-Silesian Region as well, Chart 11. The Moravian-Silesian Region has got always higher rate of unemployment than the Czech Republic's national average, because of structural difficulties and has got the first or second position in rate of unemployment. The rate of unemployment being connected the number of the unemployed, in Chart 11 we can see a comparison of the Moravian-Silesian Region with the whole Czech Republic, the number of unemployed increased in 2005. The highest number of the unemployed by education is among the unemployed with secondary education (professionally trained), c. 14% in the Moravian-Silesian Region (2006) and in the Czech Republic c. 92 %, Chart 13. The number of the unemployed decreases with higher education, this number is lowest among people with university education (2.3 %).

If we compare the Region with the Czech Republic from the point of view of the number of free working places (Chart 14), then percentage number of free working places increases and in this period it increased from 4.8 % in years 1999 to 5.2 % in years 2004. The number of people who apply for a job consists in more than 50 % of men and this number exceeds in multiples the number of free working places (only 2.26 % of applicants can find a free working place), Chart 15. The number of free working places in the Moravian-Silesian Region in comparison with the Czech Republic is 5.22 %. The number of applicants for one free working place has permanently diminishes from 2003 to year 2007 (Chart 16, Picture 3) and reached the level of 39 in comparison with the Czech Republic, where the number was c. 2. The graduates are an important category in this number. The number of graduated applicants for one working place increases as well (from 2001, CR — 6.54, MSR — 30.27) and now it is one fifth, Chart 17.

Conclusion

The Moravian and Silesian Region's population accounts for approx. 12 % of the Czech Republic, the proportion of women moderately exceeds the number of men and it is relatively constant in the specified period. Concerning the age structure, the population in the productive age prevails. The degree of economic activity of population and labour force in the Moravian and Silesian Region shows a declining tendency, but the economically inactive population shows a slightly growing trend. Concerning the age structure, the majority of population in the Moravian and Silesian Region is in the productive age. The degree of economic activity of population and labour force in the Moravian and Silesian Region shows a declining tendency, but the economically inactive population shows a slightly growing trend.

In terms of unemployment in the individual sectors, substantial changes have not occurred but the unemployment has been falling particularly in agriculture and exploitation of minerals, which is a result of the change in the structure in the economy of the Region. In particular, unemployment rate is increasing in the manufacturing industry, in trade, restaurants and accommodation, real estates, services for corporations, healthcare sector, which is related to the growth in employment in the tertiary sphere, although the absolute number in services in the Region has slightly dropped.

The branch and sector structure of the Region shows similar tendencies like in the Czech Republic, the same holding true in terms of the age structure of population. The education structure of the Region's population reflects the previous orientation of the Region to mining and raw material treatment and carries along a number of problems related to the structural unemployment as a result of the Region's restructuring. Therefore, the position of graduates in the Region is not comforting; their number when compared to the Czech Republic is five times higher. The restructuring problem is reflected in the unemployment rate in the Region, which largely exceeds the national average and the individual areas of the Region achieve double amounts. These questions are closely related to the Region's economic performance, which amounts to approx. 10%. The wage level in the Region is the highest in the Czech Republic in finance and insurance industry and the lowest in agriculture; however the gap between the national level and the Region is extending. The benefits of solution of these problems may be seen in the increasing interest of foreign investors in the Region, namely in the area of modern manufacturing industry and sophisticated sectors.
